

Stay Ahead of the Game

Password Awareness Week

#1

Password Managers

Using a password manager can feel a little bit like putting all of your eggs in one big, digital basket. But using a password manager is very safe - as long as you keep the password to your password manager secure.

In 2020, the most common sports-related password was "baseball".

Source: Powered Services Pro

Recycling is great, reusing passwords is not.

#2

Browser Password Managers

Browser password managers offer another benefit that not all third-party password managers have. Most of them will warn you if a password you use was included in a data breach and prompt you to change it.

#3

Pen & Paper

If you absolutely don't want to use a password manager, write your passwords down and keep them hidden somewhere. The odds of being hacked are way higher than the odds of someone breaking into your home and rummaging around your sock drawer for your login credentials.

Your password doesn't start with a capital letter and end with an exclamation point, DOES IT?

12 Password Best Practices

Find Out Now!

Password protection is the best place to start if you want to ramp up your cybersecurity. Setting a password to secure an entity's data is called password protection. However, because of the frequent use of passwords, people tend to overlook their significance and make careless mistakes, which could lead to

SOPHOS Endpoint Security

(800) 473-1537 sales@datatechpt.com

As ransomware, file-less attacks, and phishing continue to grow, IT and security leaders are turning to a new approach to counter advanced threats: Extended Detection and Response (XDR). For security, IT, and risk management leaders, XDR capabilities reduce the complexity of security configuration, threat detection, and response, enabling organizations to

What is Extended Detection response (XDR)?
